

Sarah Verner is a junior Biology major from Acton, MA. She enjoys beekeeping, swimming, and reading. Sarah's research in the Levin lab focuses on repeatability of the methods used to evaluate barn swallow feather color values, and pairbond strength during laying and incubation and its impact on paternity.

Mira Allen is a junior biology major, neuroscience concentration from Barrington, Rhode Island. She loves animals and enjoys horseback riding, reading, spending time with her friends, and generally being outdoors. She is currently studying parental care predictors and parental contribution of each sex in the barn swallow colonies studied by the Levin Lab.

Madeleine Campbell is a junior Biology and Environmental Studies double-major with a Public Policy concentration at Kenyon. She hails from Seattle, WA where she spends most of her time

mountain biking, rock climbing, trail running, and mountaineering. In the Levin lab, Madeleine researches the effects of developmental conditions on nestling health and quality.

or these photos lol
